## Help to customize VirtueMart 1.1

---

Is there a way to customize VirtueMart 1.1 to work like the Printing Options section of this page?

<http://gotprint.net/g/uploadBooklet.do> Or can a custom module or plugin made to be added that would give me a way to add this feature to the shopping cart? I need for the price to change depending on the options that my customer selects and as the selection is made they should see the price change. I want it to calculate the price on the fly not just when the item is added in the shopping cart that way my customers can see the price before adding the item in the cart. I know I can add the options with a (+ plus) or (- minus) the amount, but its not showing the new price to of item on the fly. I don t want to show the item like this for example: 500 +\$25, 1000 +\$75... I want it to show like this for example: 500, 1000, 5000, 10000... and for each choice the price would change on the fly. Is there anyone out there that can make this happen?
