## BUG: Display following dollar sign (\$)

Posted by Borisgoodenough - 2008/11/17 09:07

---

Inside a rounded corner box, there's an display error on numbers that start with a dollar sign (\$). The dollar sign and the two numbers following it do not display.

Text that reads \$125,000 displays as 5,000

Text that reads \$100 displays as 0

Xtypo version 1.2, J 1.0.15

Thanks for the help.

I was trying to get \$200 to print out and I had to type in \$\$22200 to get it to print. I am not sure why, but it gave me the result I wanted, but not what I expected.

The LoadPosition plugin from Joomla had the exact same problem:

<http://forum.joomla.org/viewtopic.php?f=199&t=371762>

They fixed the LoadPosition bug in version 1.5.10 by using str\_replace instead of preg\_replace.

Ok here's a quick fix:

Find this (around line 505):

```
$row->text = preg_replace("{".preg_quote($key)."}".$a."{".preg_quote($key)."}'s", $startcode.$code.$endcode , $row->text );
```

And replace it with:

```
$row->text = preg_replace("{".preg_quote($key)."}".preg_quote($a)."{" .preg_quote($key)."}'s",
```

---

```
$startcode.$code.$endcode , $row->text );
```

Cancel my last post. It doesn't fix the bug. Does anyone know how to convert the preg\_replace function to a str\_replace function?

I fixed this a few days ago and I'm posting in case it helps someone else.

Inside plugins/content/typography.php, find this code:

```
$a = preg_quote($match);  
$a = str_replace("", "\", $a);
```

Right above that, add this:

```
$code = str_replace("$", "\\$", $code);
```

That should it.
