
Does XTYPO work in a module?

Posted by Paolo - 2009/01/23 06:06

Hello,
I installed and activated XTYPE on my Joomla 1.5.9 website.
I can see the text formatted correctly only in a content page, but if I try to format with xtypo the text of a module i can see only the code in the output...
Does XTYPO work in a module? It seems no...
Can you help me?

Yes Paolo,
it's not working in module

you are welcome
sorry for this information

If you use content in module you can achieve the same effect though

i'm not sure with that, it depends on your module, if that module available to show the article like that original features and condition. i think that it can be. but if not..., it can't too

I use a module to display welcome info on my site. Could you tell me if there's any way to add the blue rounded corners from the Xtypo plugin to it? Bellow is a link if you want to see the welcome info.

Is there a way to edit the code of the module to get a blue background similar to the blue rounded corners from the Xtylo plugin to it?

hello bros,

here you can find a solution how to make work the content plugins in the custom modules:

<http://forum.joomla.org/viewtopic.php?f=469&t=264545>

cheers,

bulesz
