
Will CB Superthumb be available for J1.5 & CB 1.2?

Posted by Steve Z - 2008/07/15 17:30

Hello,

I am upgrading my community site to Joomla 1.5 and using the newly released Community Builder 1.2RC2. Are there any plans to release CB Superthumb that is compatible with J1.5 and CB 1.2?

Thanks and keep up the great work!

Cheers,
Steve Z

I've been looking for this, too. This module is an essential addition to many community sites. Thanks!

Yes I believe this cb superthumb conversion to 1.5 will have a great response and I'll buzz the developer ask him whether he'll have a time to spare to make the conversion.

Rgrds,

I like the all-in-one capability of Superthumbs in addition to other functionality provided by that module. For a recent 1.5.6 site with Community Builder 1.2RC1, I was forced to go with the modules from S4J to show newest, random, last updated, featured members.

yes this would be a great module to update!!

i look forward to it.

for legacy mode, i've fixed several trouble with this module, you can download that here

i hope this will help you and another member who want to use CB Superthumb with Joomla 1.5.x

Good luck

CB Superthumb J1.5 legacy mode

Posted by ryogi - 2008/12/23 21:42

Thank You ronysyz for your help.

I was searching on this forum for it for last few days.

Any idea when the native ver will be released for CB superthumb?

Updating the legacy plugin in Download section

Posted by ryogi - 2008/12/23 21:51

One more suggestion, if you add the J1.5 legacy version on the templateplazza download section it will save a lot of hassles of many users to search for it.

Strangly if I search for "CB Superthumb J1.5" on this site it does not show this thread but with same search term used on Google I could get it on first line !!! Google rocks.

Cheers

If Anyone wants to use the cb_superthumb for Joomla 1.5 and CB1.2, the current file available on this site works.

But it has many syntax errors. It creates problem in FF for link colors etc. It disturbs the IE layout.

Change mod_cb_superthumb.php file with the attached file.

thanks. will test this now.

Am hoping that the CB Superthumb module will be Joomla 1.5 native soon.

Ok Attached is the Complete Final Version package that works in Legacy mode. I have tested it with FireFox 3.0.5 and IE 7. http://www.templateplazza.com/images/fbfiles/files/mod_cb_superthumb_legacy1.zip

allo

This version works better than the version for joomla 1.5

by cons, I created a field in cb profile as not to give the username and I want to be the fields that display either the palc the username / name.

What files to edit?
