## xtypo formatting is not displayed

Posted by AKGoud - 2007/12/06 19:17

---

Hi,  
I am a newbie. I have just installed xtypo plugin for J1.5 and when I tried to use it like this in the content editor (tinyMCE) it shows the content normally along with the xtypo tags. I used like this {xtypo\_alert}my content goes here. i typed exactly like this {/xtypo\_alert}.  
Can someone help me what has gone wrong or it is not working or do i need to install any supporting plugins.

I'm having the same problem. The plugin is enabled in Joomla 1.5. If you go to [www.albanyobserver.com](http://www.albanyobserver.com) (currently) you'll see how the code is displayed rather than the CSS style. Any suggestions?

Hi,  
I guess you mean "did I enable the plugin", Yes.

Hi,  
I have published the plugin and you can find it here [www.janathapress.com](http://www.janathapress.com).

Few things to mention, I am using Alpha content layout for content page.

1. The xtypo format is not displayed in the index page (introductory text page) , but works fine in full article page when the user clicks on the article.
2. Doesn't work in mod\_html

Both options you can see at [www.janathapress.com](http://www.janathapress.com)

Any suggestions?

Thank You

Hi,  
Should I take it for grant that I should not use xtypo in those two circumstances? :( (Alpha Content and mod\_html)
