
Xtypo in fireboard posts

Posted by Andrew Mclaughlan - 2007/12/16 03:34

How do you use xtypo in fireboard posts? Iv seen it done in a few threads on this forum. But it doesn't work the standard way!

Hi Andrew,
Yes, it doesn't work the standard way, and you can doing that too

Go to Site Mambot: Edit then you change the Parameters as you want

Regards
Rony

any ideas on what to change the parameters to? I dont really understand what you mean. Editing the parameters does not allow me to use it in forum posts.

Hi Andrew,
It can be activated from your fireboard configuration.
From your administrator page go to :
Components > Fireboard Forum > Fireboard Configuration

Set the "Joomla Mambot Support" parameter into "Yes" :)
