## Manual Uninstall

Posted by Mark - 2007/12/21 14:16

---

I have just upgraded from RC3 to RC4 and believe I may have deleted/lost some of the files.

Unfortunately, I can no longer install the component again, nor uninstall as I get errors both times.

Are there any articles or instructions on manually uninstalling so that I can reinstall from the beginning again?

Many thanks in advance, Mark

Hello Mark,

Basicly, you can uninstall this extensions as others extensions. For your case, i guess while you upgraded from RC3 to RC4, there are several data base that they have vanish.

if it like that, you could be not uninstall from your back-end, so please delete this component with manually and then try to install again.

Good luck  
Rony

Thanks for your reply. Unfortunately I cannot uninstall using Joomla as I get the following error:

Plugin Uninstall: Manifest File invalid or not found

I do not know what the manifest file would be, but if anyone can tell me, I'll see if I can upload it manually then perform an uninstall...

sorry, i'm sure there is something into RC4 and about their upgrade. maybe you can ask someone to help you at [joomla.org](http://joomla.org) forums.

please don't forget to share your success with us. good luck
