
How to use it

Posted by ananta - 2008/01/10 03:17

where to give this code? in my article, does it work under wysiwyg, or i need to write article in html.

```
{ x t y p o _ a l e r t }testing { / x t y p o _ a l e r t }
```

Hi ananta,
yes, it does work under wysiwyg
and don't forget to enable its

lets us know, have you try it?

May be I am missing something, What I did is downloaded, installed, go to plugin manager and enabled it.

Then tried to write on WYSIWIG editor, Tiny MCE (default of JOOMLA)

But I am not getting this, even in this page , I try writing
{xtypo_alert} try {/xtypo_alert}
, is this working here, no, why?? I see some friends have written here too.

try to check its
from your Back-end area, choose Mambots > Site Mambots. then at Mambot Manager , you can find Xtypo, please make sure that this plugin is Published.

Re:How to use it

In my back end (admin area) there is no mambot manger but plugin or module manager . and in plug in manager I have enabled X typo, there is no publish button. I am so lost.

Hai ananta,
if your use joomla 1.0.x, you will find mambot manger,
and if you use joomla 1.5, you will find plugin manager.

in plugin manager, you can enabled Xtypo with choose the radio button of Yes at Enabled

Regards
Rony
