## adding kwik menu to musician piazza (problems)

Posted by rajaito - 2008/01/13 18:55

---

I have two parts to my support request.

1. Hello, I have installed kwik menu and it appears to work ok in the standard joomla template. Yesterday, I joined this club and downloaded and installed the musician piazza template. Kwik menu now wants to be displayed on two lines by default. Also when I mouseover it it moves all the other module blocks around.

2. Kwik Menu also seems to have a lot of white space around it. It would be ideal if it displayed the same size as a module block. (I have experimented with the sizing options, but this does not address the problem with white space.)

Hi rajaito,

Thanks for join with TP and use as well our products...

1 Can you provide a live site url to check the problem?

2 The same thing

So with this we can see the site and problem better

Best Regards,

=====

Hello

If you still have any trouble

please make a new thread

Thanks
