
PagePeel Banner Installation Video Tutorial

Posted by Andy Sikumbang - 2007/11/14 19:04

Jerid from screenerschoice.com has made a great video tutorial on Install PagePeel Module with ease, and converted into swf by ricardo :)

Great effort Jerid ;)

You can see the video from here

Unfortunately, this video is too small to actually see what is happening in the tutorial. Can this be exported larger? Just a suggestion. Otherwise, very helpful!

You will lost some image quality anyway you can right click and Zoom in!

Thanks

Regards,

Hello santhosh,
what about the tutorial above, i think that if you able to use on joomla 1.0.x, it will easy for you to use at Joomla 1.5.x

Dear ronysyz

many thanks for reply

I managed to install it on Joomla 1.5 but it wont work on Firefox, any fix for this

did you use PagePeel Banner for joomla 1.5 on your joomla 1.5?
i don't find any trouble with that

what about if you give me more details, about your PagePeel Banner version, your template and your url?

The video tutorial was great and I did everything it said but it didn't mention how to change the peel image in the module specifications - it keeps the default ones in there and I cannot figure out how to get my image in there??

I created Page Peel as a Banner Client and made a new Banner where I uploaded my .jpg image but the image doesn't show up as an option to select when configuring the Page Peel Module. HELP!!
