
Can I display content items in tabs?

Posted by Ade - 2008/01/18 11:17

First let me say a Big thank you for this. I understand how to post modules into tabs but say I just want the actual text and images in a tab named Welcome, is it possible?

Hi Ade,
yes, it's possible to do
you just rename TAB1 or TAB2, etc into the Title of the X Tab parameters

Regards
Rony

Let me join this... :)

I think what you want is include your content itens into a tab right?

This is not possible at the moment!

Regards,

Thanks guys for your input. I realised I could not input content items into jootabs as it is for Modules. So I went for another tabs soluton for content items. However, I look forward to using jootabs in another project. Cheers.

Hi Ade,
I believe you never heard about minifrontpage module, do you?
Minifrontpage will load your content item(s) in a module. And after you get your specific content item(s) on a module - using minifp, you can assign this minifp module position to JooTab parameter. That way you can get content item displayed on the JooTab.

;)

there are another way to display content item in tabs
i just find out with using mod_contentitem...

-just configure mod_contentitem to display any categories/section
- place it under user5 (for instance)

- configure jootabs on tab setting
tab 1 - user 5

done..

hope this help.
