
Is it possible to make Mfp module title as a link?

Posted by mtl - 2008/03/08 18:52

Is it possible to make Mfp module title a link for a certain category? The goal is to display only module title as a link to the category(in tags) without displaying it in every module article.

Yes that's possible but not implemented in the latest minifp module. If you really really need that, just send me a buzz for a custom work.

:cheer:

Hello, Erwin

It would be very useful if you add such a possibility in the latest versions
