
Division by zero error!

Posted by Alex - 2008/01/22 16:47

I'm getting this:

Warning: Division by zero in /home/vegano/public_html/vegan/modules/mod_minifrontpage.php on line 196

Warning: Division by zero in /home/vegano/public_html/vegan/modules/mod_minifrontpage.php on line 201

Warning:

getimagesize(/home/vegano/public_html/vegan/images/stories/http://www.guiavegano.com.br/images/icones/direction.gif)
: failed to open stream: No such file or directory in /home/vegano/public_html/vegan/modules/mod_minifrontpage.php on
line 102

Warning:

I FOUND OUT WHY!!!

you need to use `imagecreatefromgif()` instead of a image from some other random link...

if you upload the photos you want into the folder (stories) etc, and choose the image in the control panel, everything
works perfectly fine

And if no image is uploaded?

Then you should set the Show Thumbnail option to "Hide" on your minifp module parameter...

=====

But if some contents have images and some dont?

First of all, Mini frontpage is an awesome module.

I also get this "Division by Zero error" constantly whenever there is no image in the article or when the image is located at the foreign server.

Latter problem can be easily solved by moving the images to the local server.

However, the formal issue is bit more complicated.

As Markus Thiel pointed out. problem with setting the Thumbnail option to "hide" is that some of the articles have images and some don't.

I have multiple writers posting articles constantly and some have images and some don't.

I hope this can be remedied somehow

Thanks again for your hard work.

Division by zero means minifp can't find the images path supplied, either from another server or if the image(s) are not in the /images/stories/ folder. but it should be displayed the default image (the minifp icon) and this can be changed easily by you guys (is it nice to have the default one rather a text only article?).

I hope we can fix this and add this feature to the new version of minifp. But I think we can't do much if the images are on another server.

Thanks all for testing and using minifp.

Hi guys, first of all thanks 4 this amazing module

im with the same problem

will be waiting for next update

of i forgot

im using

on intro text (server image)

and external image on full text

even like this cant be a solution ?

I'm having the same issue now that I moved to a new server..

could u clarify the fix? I'm not quite sure I follow...
