
Error Message how to fix

Posted by carltonb - 2008/04/19 17:13

My site is not live.

Am using 1.24 and Joomla 1.52

The site has been working up until today. I do not know what I changed but am now getting an error of

Notice: Trying to get property of non-object in /var/www/mymispoche/modules/mod_minifrontpage/helper.php on line 479

Line 479 is

```
."WHERE type='content_category' AND published='1' AND
```

```
link='index.php?option=$option&task=category&sectionid=$row->sectionid&id=$row->catid");
```

Second problem also just started on a thumbnail.

Error is....

Notice: Undefined offset: 0 in /var/www/mymispoche/modules/mod_minifrontpage/helper.php on line 167

Line 167 is

```
$rows->images = $txtimgelsr;
```

Is this enough info to tell me what I need to debug.

Thanks

carltonb

hello carltonb

do you have live url to see?

Re:Error Message how to fix

Posted by carltonb - 2008/04/19 17:49

As stated above my site is not live.

I have been tinkering with it and wonder if a program that uses ajax might have a conflict?

carltonb

Posted by Andy Sikumbang - 2008/04/19 17:58

not really sure ...

did you use an external image for your content?

Re:Error Message how to fix

Posted by carltonb - 2008/04/19 18:14

What do you mean by an external image.

Re:Error Message how to fix

Posted by Andy Sikumbang - 2008/04/19 18:20

I mean any image files that is not hosted under your server/host

=====

Re:Error Message how to fix

Posted by carltonb - 2008/04/20 11:59

The image resides in my directory on my hard drive.

I have the same error messages. The error is only reported on screen if the parameter display_errors in php.ini is set to On. Most production enviroments have this set to Off which may be why not everyone gets it. The message relating to default.php is repeated 20 times. The second message appears once for each article for which a summary appears in the expanded list of recent articles.

Hi,

I have the same messages. They are appearing 25 times in log each time mod_minifrontpage is used on displayed page. I'm using Joomla 1.5 version on Joomla 1.5.3

Here are examples of this messages:

Trying to get property of non-object in /directory/modules/mod_minifrontpage/helper.php on line 476,

Undefined offset: 0 in /directory/modules/mod_minifrontpage/helper.php on line 161

Trying to get property of non-object in /directory/modules/mod_minifrontpage/helper.php on line 476

Undefined variable: offset in /directory/modules/mod_minifrontpage/tmpl/default.php on line 60

=====

Oh, are you install system legacy in Joomla 1.5.x? Then please upload your site on server. Or version Xampp or Wamp and other more updated to solved problem.

Regards

Re:Error Message how to fix

Posted by Zen - 2008/05/12 03:04

This problem is when you are using Legacy off and on. I was installing it on clean new system and problem still exist.

Zen

PS. This is Notice so it's not very big problem but it write a lot of bugs to logfile

Hello Zen,
this is about your server version, but don't worry, you able to fix that. Try to define each the Undefined of that.

Regards

May you provide your live site url ? But we don't know if you not upload your file localhost. Please, upload!
Or wait answer from Mr. Moderator.

Regards.

I have a live site with the same problem.
The site was set up on localhost XP2, WAMP, joomla 1.5.2, in legacy mode.
Everything fine.

Published it yesterday to a server with MySQL 4 (don't know if that's important).
Everythings show up on the site, but at lot of Notice & Error message.

If you're interested, welcome to check it out www.sverige.fo

Don't know what to do !

Someone with an idea, what causes the warnings ?

What you mean that it's my server version? I'm running CentOS 5.1, Php 5.2.6, MySQL 5.0.22 I think it's quite common configuration for big site as this configuration is very stable.

I don't know where to define this offset. Could you provide fixed version of this module?

It's starting to be a problem because amount of those notices is making debugging of other elements of site hard.

Best regards,
Zen

Re:Error Message how to fix

Hello Zen,
first. undefine trouble happen when your server can't define its with correctly, so you need to insert define variable for that.

second. at my files, i can't find the trouble with similiar line with your file, would you like to share your files please? (helper.php and default.php)

Regards
Rony

I'm having the same problem as the rest of the people. Is anyone every going to address this issue? I've been waiting for an answer to the question for weeks. It's a great module and one of my favorites. But it just doesn't seem to work in Joomla 1.53.

I have the same problem as many people do here.

A couple of us have also posted here:

http://www.templateplazza.com/component/option,com_fireboard/Itemid,80/func,view/catid,20/id,23685/#23685

Is there an answer?

Re:Error Message how to fix

Posted by StephW - 2008/08/20 08:06

I made the following change at approx line 475 in helper.php to correct the problem.

```
$row = $database->loadObject();  
// $database->loadObject( $row );
```

```
