## Minifrontpage - Mudule class suffix and CSS in Min

Posted by Antonis - 2008/04/22 07:45

---

Hello everyone and thanks for this usefull module!

Here is my question,

I have installed a mini front page module in my joomla installation. It is a very nice module i must say. The thing is that for some reason the module display the linked titles of the content i display to my front page in dark grey. My background is black and for obvious reasons i want to change the color of the linked titles in another color, like red or white. The module has a choice to put a "Module Class Suffix" - a suffix to be applied to the css class of the module (table module.table), this allows individual module styling.

What should i do to make this setting?

Should i put some code to the main css of the template - and what code?

Should i make and upload a new css - where in the server and how can i call it-use through the module settings?

Thanks in advance,

Antonis

Hello Antonis,

You should be change or edit your css file, there are several code, please find that in your template file

Regards

Rony

Hello,

When you say change css, you mean the main css of my template, or module's css? I m sayng that because the module gives the ability to use a customm css. The thing is that i do not know how to do it. Should i crate a new css? Where should i upload it? Should i add the new parameters to my template's css - that is editable? Anyone got a link to a tutorial or something???

Regards,

Antonis

Hello Antonis,

i meant your template css file

i hope that you able to do that with your self or maybe you need to pay some custom work?

Regards

Rony
