
xTYPO not working

Posted by aDHAM - 2008/04/25 19:30

Installed it worked fine for an hour or so as soon you add anything to joomla anything at all it stopes working. and from I hear here too not well supported as they dont answer questions. so its crap dont install it unless they fix it which I doubt.

can't seem to make xtypo show up in custom html modules in joomla 1.5. It worked great in Joomla 1.0. The Xtypo however does show up when placed in a regular article, but i don't understand why it won't in html editor like it did in joomla 1.0? any inputs would be great. thanks
