
xtypo and the break line

Posted by JEAN LOUIS MEISTERMANN - 2008/04/01 03:33

When i put a break line in xtypo, it don't show the text after the break line. Why ?

Here's the test

{xtypo_info}Lorem ipsum dolor sit amet
This should be line two after break{/xtypo_info}

Obvious that xtypo is designed just for a one line sentences/words.

can't seem to make xtypo show up in custom html modules in joomla 1.5. It worked great in Joomla 1.0. The Xtypo however does show up when placed in a regular article, but i don't understand why it won't in html editor like it did in joomla 1.0? any inputs would be great. thanks
