
How to add more space between frontpage items?

Posted by Guy - 2008/05/04 09:16

For my use of this module I have selected to display the content items in one column and using a number of rows for each content item. There seems to be only a single space separating each item. I would like to increase this space to clearly set the items apart. I'll bet this is a super easy adjustment...but I just don't know the code well enough.

By the way...great module!

Thanks,
Guy
