
Community Bulder for Joomla 1.5 native ???

Posted by Thomas Crawford - 2008/05/04 15:23

Does anyone know when the Community Builder Development Team are going to get around to releasing their Joomla 1.5 native/stable version? I saw something on their site that indicated it was supposed to be released at the beginning of April, but it is my understanding that such has not yet been realized.

Hi Thomas,

Nant and his team decided to release CB 1.2 (which comes with Joomla 1.5 full support) just for DOC Subscribers in the early start of April... So doc subscribers have in his hands (i do :P) new CB!

It is supposed to be released to the public very soon (less than a month).

Lets wait for it :)

Best Regards,

globalnerd.org the team behind the Account Expiration Control Component are currently working on plans for a rival community builder componet for j1.5.

plans for this sound good

ok, so this is the problem, then. I just got locked out of one my comunaplaza installs because of soem super admin bug with j 1.013? it's happened several times before and it's just too risky anymore.

I use AEC on the one site that hasn't locked me out yet, too. So, the question is:

1. do you kno a fix for getting back into the communa plazza install when yu get super admin locked out? i tried several fixes, but none worked and it could have to do with AEC installed.

2. NOW, I seek to go j1.5 for everything, your templates included, but i'm hearing that now we have no CB ready for 1.5 just yet. Does that mean I can't use a communa template with 1.5 yet?

thanks for feedback. I'm sure others have the same issue with the unstable joomla crap.

jz
