## Kwick & SEO problem

Posted by Chris - 2008/04/08 06:58

---

Hello

I have installed kwick and it works fine. But when i enable the SEO function the kwick menu viewable only on frontpage. On all other sits the pictures are not viewable but the menu works.

I hope anyone can help me..

thanks

Have a live site to see it in action Chris?

:cheer:

---

## Re:Kwick & SEO problem

Posted by Chris - 2008/04/08 09:55

---

Yes you can see it Here

I have teste it with joomla SEO and smartSEF..same problem

---

## Re:Kwick & SEO problem

---

Yes, unfortunately that module not optimized to work with any SEF enabled. Hope the module developer can adapt those on the new version.

:cheer:

---

---

thanks for answer

thats bad...

can i nothing do? to convert the path of the pictures?

---

hi chris,

i think it's possible to befixed with adding a \$mosConfig\_live\_site before the the image path

Hello Andy

Can you say me where i insert the code in the kwick file?

```
window.addEvent('domready', function(){  
    var myMenu = new ImageMenu($$('##kwick .kwick'),{openWidth:});  
});
```

```
#kwickcontainer {
```

```
    margin:auto 0;
```

```
}
```

```
#kwick {
```

```
    /*border-bottom: 3px double #333;*/
```

```
    margin-top: 10px;
```

```
    width:px;
```

```
}
```

```
#kwick .kwicks {
```

```
    display: block;
```

```
    height: px;
```

```
    margin: 0px;
```

```
}
```

```
#kwick li {
```

```
    float: left;
```

```
    margin:0;
```

```
    padding:0;
```

```
    list-style: none;
```

```
}
```

```
#kwick .kwick {
```

```
display: block;

cursor: pointer;

overflow: hidden;

height:px;

width:px;

/*padding: 10px;*/

background: #fff;

/*border-right: 5px solid #202020;*/

border-right: px solid ;

}

#kwick .kwick span {

display:none;

}

#kwick .opt1 {

background: url(modules/mod_kwick_sliding_menu/kwick_menu/images/);

}

#kwick .opt2 {

background: url(modules/mod_kwick_sliding_menu/kwick_menu/images/);

}

#kwick .opt3 {

background: url(modules/mod_kwick_sliding_menu/kwick_menu/images/);

}

#kwick .opt4 {

background: url(modules/mod_kwick_sliding_menu/kwick_menu/images/);

}

#kwick .opt5 {

background: url(modules/mod_kwick_sliding_menu/kwick_menu/images/);

}

#kwick .opt6 {

background: url(modules/mod_kwick_sliding_menu/kwick_menu/images/);

border-right: 0;

}
```

---

---

Chris,

could you try to edit this,

```
#kwick .opt1 {  
background: url(modules/mod_kwick_sliding_menu/kwick_menu/images/);  
}
```

with this,

```
#kwick .opt1 {  
background: url(/modules/mod_kwick_sliding_menu/kwick_menu/images/);  
}
```

Also take the same action for #kwick .opt2 to .opt6 class.

Let me know the result.

---

must i replace "url" to the root?

=====

---

## Re:Kwick & SEO problem

Posted by Erwin Schro - 2008/04/09 14:07

---

no need to replace that 'url' word, just try with only that

or

---

I have tested the 2 codes it doesnt work :(

---

## Re:Kwick & SEO problem

Posted by Chris - 2008/04/10 07:12

---

i have it

```
#kwick .opt1 {  
  background: url(http://www.xxx.com/modules/mod_kwick_sliding_menu/kwick_menu/images/033.png);  
}
```

that is not the best way but it works

---

## Re:Kwick & SEO problem

Posted by Erwin Schro - 2008/04/10 10:48

---

Ups sorry for the last answer, then you should write like this,

```
#kwick .opt1 {  
  background: url( modules/mod_kwick_sliding_menu/kwick_menu/images/033.png);  
}
```

Don't tell Rony about this fix will you...:lol:

Hello Guys,  
This is the fixed solver.

1. Please insert this code after after `$menuimg6 =$params->get( 'menuimg6','6.png' );` but before `?>`, the code is:

```
$baseurl = JURI::base();
```

---

2. At every #kwick .opt1 {  
background: url(modules/mod\_kwick\_sliding\_menu/kwick\_menu/images/);  
}  
please change it become to  
#kwick .opt1 {  
background: url(/modules/mod\_kwick\_sliding\_menu/kwick\_menu/images/);  
}

so #kwick .opt1 until opt6 become to like this

```
#kwick .opt1 {  
background: url(/modules/mod_kwick_sliding_menu/kwick_menu/images/);  
}  
#kwick .opt2 {  
background: url(/modules/mod_kwick_sliding_menu/kwick_menu/images/);  
}  
#kwick .opt3 {  
background: url(/modules/mod_kwick_sliding_menu/kwick_menu/images/);  
}  
#kwick .opt4 {  
background: url(/modules/mod_kwick_sliding_menu/kwick_menu/images/);  
}  
#kwick .opt5 {  
background: url(/modules/mod_kwick_sliding_menu/kwick_menu/images/);  
}  
#kwick .opt6 {  
background: url(/modules/mod_kwick_sliding_menu/kwick_menu/images/);  
border-right: 0;  
}
```

i hope this information will help you

Best Regards  
Rony

Sadly enough, none of the solutions offered here seem to work.

Any idea what could be causing non-function of the kwick menu on every page but the front page?  
(<http://www.piggybags.net>)

please advice

rod

Furthermore... it also screws up my "need help" menu section. throwing mysql errors for database.php at lines 287 to 289:

```
$this->_cursor = mysql_query( $this->_sql, $this->_resource );  
if (!$this->_cursor) {  
$this->_errorMsg = mysql_errno( $this->_resource );
```

---

```
$this->_errorMsg = mysql_error( $this->_resource )." SQL=$this->_sql";
```

```
