
Undefined constant problem

Posted by Travelhamster - 2008/05/14 23:25

Hi guys,

I love your module, but am having probs with it. I get the following error code when trying it out. I'm running Joomla 1.5 without legacy mode enabled.

The url is <http://www.travelhamster.com/afghanistan.html>

Any assistance would be appreciated.

Notice: Use of undefined constant tablink - assumed 'tablink' in /home/trave81/public_html/modules/mod_jootabs/mod_jootabs.php on line 24

Notice: Use of undefined constant tabcontent - assumed 'tabcontent' in /home/trave81/public_html/modules/mod_jootabs/mod_jootabs.php on line 25

Notice: Use of undefined constant mouseover - assumed 'mouseover' in /home/trave81/public_html/modules/mod_jootabs/mod_jootabs.php on line 26

Notice: Use of undefined constant user1 - assumed 'user1' in /home/trave81/public_html/modules/mod_jootabs/mod_jootabs.php on line 30

Hello Travelhamster,

This trouble will happen if your environment (server version) is not able to do that. but don't worry, you able to define that. please, define every "undefined"

i hope that you able to do that

Regards

Thanks for your fast reply.

Could you maybe point me in the right direction? How do I define the undefined?

Thanks a lot

Regards

After some fiddling, I managed to do it by putting "..." around the constants...

thanks anyhow for your assistance!

Regards
