
Images Are Not Showing

Posted by Chris - 2008/01/14 01:54

I have been using xtypo on my sites for some time now, love it.

I am working on a Joomla! 1.5 based site and have uploaded the new version for it and I have no images.

Yes it is published, and the images show on the pages for the plugin, but when I put it into a page, it does give me a background color, but no image.

On this page, <http://www.southernrescue.org/Membership/46.html>

I have two items, one it an xtypo_info and a xtypo_button1

Now, when I do a source view, where it should be I see the following:

```
p style=" background: url(plugins/content/xtypo/icon/info.gif) center no-repeat; background-color:#F8FAFC ; background-position: 15px 50%; text-align: left; padding: 5px 20px 5px 45px; color:#5E6273; border-top: 2px solid #B5D4FE ; border-bottom: 2px solid #B5D4FE;"
```

Re:Images Are Not Showing

I have the same problem. How did you fix this issue?

Re:Images Are Not Showing

Posted by daddelkopp - 2008/01/30 05:55

Open .../plugins/content/xtypo/icon/xtypo.php

```
Search for every
url(plugins/content/xtypo/icon/
Replace with
url(/plugins/content/xtypo/icon/
```

An "/" was missing before plugins. It works for me.

Hi guys, i've tried this fix but it doesn't worked for me.

Im using 1.5.1 with sef enabled and the images aren't showing...

Any help?

Regards

Bruno

Hello friends! I have the same problem. Mambot published, joomla 1.0.14. Please help.

Home is here <http://www.ahouse.com.ua>

Re:Images Are Not Showing

Posted by boris - 2008/02/12 02:48

Interesting, i have mambot Xtypo but i can't find any files about xtypo in my ftp... I have 1.0.13 and images not working...

Thank you for help!

B.

Posted by Bruno Bertelli - 2008/02/14 15:44

Hello guys

i've tried this fix:

Search for every
url(plugins/content/xtypo/icon/

Replace with

url(/plugins/content/xtypo/icon/

But without success, any fix guys? I'm using 1.5.1 with all SEO/SEF options enabled.

I hope that u can help us...

Regards,

Bruno

I also have the same problem of the plugin being published, background color showing but not the images.

Ive tried the fix suggested by daddelkopp but I don't have an icon folder. The path to my xtypo.php reads as plugins/content. Theres a xtypo folder inside the content folder but that just holds the folders for the images and the index.html and logo.gif. Am I missing something here? I cant figure out why the rounded corners wont show or any other image show when I type in the code in an article.

ok here is the fix, open
plugins\content\xtypo.php

search for ALL occurrences of
"url(plugins"

and replace it with
"url(..plugins"

that did the trick ..this is ridiculous though shouldnt someone test a component before releasing it ?

Hi Monique, im glad that this work to you!

But it doesn't for me, unfortanetly...

Do you have SEF enabled? I have... maybe this is my issue that TP insists in not respond...

Regards

Bruno

Search for every

url(/plugins/content/xtypo/icon/

Replace with

url(/plugins/content/xtypo/icon/

An "/" was missing before plugins. It works for me.

daddelkopp use Joomla 1.51 and Core SEF enable. But I doesn't use "mod_rewrite" or "adding suffix".

Hi daddelkopp, thanks for your aswer.

Unfortanetly it still's doesn't work for me... I have the 3 optios in SEF enabled, it's important for me.

I'm just waiting a position of TP staff, cause i think that they should test and analyze their products before release it.

When i disable the SEF, xtyo works fine, but i need it with sef...

Regards

Bruno

Hellow...excuse us...we release it under a GNU/GPL...this is a free stuff anyway...

With 'free' means that we share it to the community, you use it and also we hope you test it and if something not right, you report to us - thx God you propose how to fix them - not just saying that this is a ridiculous...

:side:

To fix this c**p you've got to edit the xtyo.php and ad the whole string for your site before the "/plugins"...

In Example:

<http://www.yoursite.com/plugins...>

By the way, the response is nothing but hilarious...

Not for being free something is less important. In the case exposed one should think what's the difference between this and a virus...

Hmm, that didn't work for me at all, it made the system not parsing the bot at all, and instead I just got the code printed out straight up in the window, weird thing is that the graphics shows up fine in some of my articles.

Didn't have this problem before the SEF either, well, I guess I'll just have to wait for an update.

Great plugin otherwise.

same problem , with xtypo images not showing up in custom html modules.. it does work in content articles.. wierd! been this way since upgrading to J1.5. Everything worked great when i was in J1.0 . I don't think its the image paths as this is working in the contents sections, but not the html modules. why o why? spent couple weeks trying to figure this out already but still no go, any help? thanks

Re:Images Are Not Showing

Posted by Boaz - 2008/05/14 07:24

Thanks for this post, it solved my problem. Just one thing, you actually have to do the following:

{xtypo_code}Search for every

Code:

```
url(plugins/content/xtypo/
```

Replace with

Code:

```
url(/plugins/content/xtypo/
```

```
{/xtypo_code}
```

there also images outside the icon gallery. Btw, this takes a while...

Re:Images Are Not Showing

Posted by Steve - 2008/05/23 04:09

Joomla 1.5.3

With SEF enabled...adding a full paths in the xtypo.php..is the only thing that works for me.

Without the full paths images only show on the first pages e.g.

<http://www.mysite.com/blogview> = images show

<http://www.mysite.com/catlistview/article> = images dont show

I am no scripiter but it seems to me to be Joomla SEF bug...some other plugs seem to lose the images as well.

Re:Images Are Not Showing

Posted by Steve - 2008/05/23 05:12

Added \$baseurl = JURI::base(); to line 22 ish and ".\$baseurl."plugins/content/xtypo/icon/to all the paths. Not a scripter.

Worked for me with SEF enabled.
