
jootabs is

Posted by moisea - 2008/05/18 18:35

hello, first of thanks for the module...nice one.i am having though a problem with jootabs as whenever i load/refresh the page i get the first tab showing fine BUT followed at the bottom of it by all the rest of the tabs each displaying in rows. need help here to fix this please.
many thanks.

Hello moisea,
do you have url for that, we need to check its.

Regards

thanks RonySYZ, i got it working there must be something wrong with my browser. thanks again for the prompt reply. just was wondering is there a way to add jcal pro calendar in one of the tabs.
can i also use my own css styling for the tabs?
thank you.

can i also use my own css styling for the tabs?

yes, you can do that
you able to change that color or other like you need

Hi,
Thanks for the great module. I have some basic questions:
1/ How do I change the tab name/label?
2/ How do I incorporate MFP/or JCAL (above) into one of the tab?
I tried to search but could not find the answers in the forum.
Thanks again.

sorry, I found out how to change the tab. However, the rest of the page went blank except for the section where the tab names are. I am using J1.5 and a template that is not from templateplazza.
Thanks.
