
MiniFrontPage meantime updated

Posted by Erwin Schro - 2007/08/12 09:19

Hi All,

This is a meantime updated of minifrontpage.php file. With this little updated, some bugs/errors like:

- missing \$class_sep warning/error,
- png images warning/error issues, or
- loading time issues

hopefully not happen again. Please, feel free to download and paste/re send to your module folder after unpack this file.

And if you still experience some kind of errors with this updated file, just let me know. Thanks all.

Re:MiniFrontPage meantime updated

Posted by Fred - 2007/09/03 08:56

I am getting this type of error if no image is selected in the story: Warning: imagegif(): Unable to open '/home/www/xxxxxxx/images/stories/flags/Canada_thumb.gif' for writing in /home/www/xxxxxxx/modules/mod_minifrontpage.php on line 141

However, I have not yet tried the update will in the morning.

Hi,

Try to upgrade first...

After if the problem is show again let us know!

Regards :cheer:

Re:MiniFrontPage meantime updated

Posted by Fred - 2007/09/03 16:12

Hi Morning

just tried and here is the full error messsgae: (remember only if no image was added to the story)

Warning: Division by zero in /home/www/xxxxxx/modules/mod_minifrontpage.php on line 196

Warning: Division by zero in /home/www/xxxxxx/modules/mod_minifrontpage.php on line 201

Warning: Division by zero in /home/www/xxxxxx/modules/mod_minifrontpage.php on line 203
article thumbnailCayman's National Hurricane Committee (NHC) working with Hazard Management Cayman...
+Fullstory

Re:MiniFrontPage meantime updated

Posted by Fred - 2007/09/03 16:48

There is also another issue with the upgrade the thumbnail image is just generating a black box of the images not a picture and I also just noticed that subject of the story is printed faintly in the minifrontpage.

Thanks

=====

Re:MiniFrontPage meantime updated

Posted by Erwin Schro - 2007/09/03 17:09

Hi Fred,

Do you have any live site to see this error?

Did you intend to show more than one articles on your minifrontpage? If you did, then is another articles - in this group of minifp - which have image on it, show the thumbnail properly?

=====

Re:MiniFrontPage meantime updated

Posted by Fred - 2007/09/03 17:50

This form tells that I have no permission to post link (guest) will create an account in a while

Live cakafete-inc.com

And forget about the image its seems to be happening when I tick Preserve Aspect to yes.

Re:MiniFrontPage meantime updated

Posted by Fred - 2007/09/04 00:33

All of the small boxes that you see on the frontpage is the miniFrontPage that cloned and the issues happens on any. Position 11, 12, 13, 14, user1 and user2 also 15 and it happens on ever psioition. I am running Joomla 1.3 and JA Submit version 2.1 with JCE admin.

I'm turning back on position user1 that you can see the error I ha it on all day but its seen by all visitors I will leave it for the next half hour

Fred

Re:MiniFrontPage meantime updated

Posted by Ricardo Sousa - 2007/09/04 00:36

I dont see any problem... :S

Can you explain better your problem and say me what browser are you using ...???

Regards :cheer:

Re:MiniFrontPage meantime updated

Posted by Fred - 2007/09/04 00:44

Its not the browser. However, I used Firefox and Explorer.

In position user1 I did a post very early this morning that you could see but turned it off this afternoon. I now turn it back on that you can see.

Its if I post the story and do not select add an image this happens. And this is from the very first time that I installed FP but for me its OK it users that I am worried about that will not always add an image to their submissions

Re:MiniFrontPage meantime updated

Posted by Ricardo Sousa - 2007/09/04 02:05

Did you instal the new version...??

There are some bugs fixed... ;)

If yes i dont now how can i help you :dry:

Erwin will now... please wait....

Regards :cheer:

Re:MiniFrontPage meantime updated

Posted by Fred - 2007/09/04 02:12

OK, Thanks.

I did installed the update.

I like the FP will just have to setup some form of monitoring.

It has to do with the default image not getting added if no images was selected at the time of posting the articles.

I will also delete all and re-create them with the update and see if this fix the issue.

Thanks

Re:MiniFrontPage meantime updated

Posted by fred - 2007/09/05 02:29

Sorry, I am back.. Don't be mad at me!

If the new folder or folders that you add under images/stories do not have the permission 777 or 755 (writer-able) permission depending on your server default setting then the error comes up because MFP cannot write the thumball. (solved) Now since I select an image all is well.

Ricardo, I'm not getting how MFP determine to automatically add the default images if one was not selected at the time of posting the story.

```
// if there's no image in an article, give it a default one - change image name here if you have one
$default_image_path = "modules/minifrontpage/default.gif";
```

I ask because there is no indication that an image code was added just the error that I pointed out before.

In my opinion, it seems that I am not following something. What's your insight?

I have figured the rest and yes I'm using the upgrade. A little better understanding how things work would help me sort out my issue.

Thanks and again sorry to be a pain in the bot

Re:MiniFrontPage meantime updated

Posted by Ricardo Sousa - 2007/09/07 00:00

Hi,

I don't write this script, Erwin wrote... so I am a little bit out... but if I understand the MiniFrontPage what he does is pick the article image (inserted by mosimage or by Editor) if there isn't any image it picks the category or section image... If there is no image set to the category or to the section it picks the default image... So if you don't have any image in the article & section & category it will pick the default one.

You can change the location of this image selecting the each one you want and add the url path to this line:
`$default_image_path = "modules/minifrontpage/default.gif";`

you can find that in index.php file...

Regards,

Hi,
how to update the module without uninstall the previous version of MF?
Many Thanks,
Edoardo

Re:MiniFrontPage meantime updated

Posted by mclaughlan6916 - 2007/09/21 15:01

was this problem ever solved?

Re:MiniFrontPage meantime updated

Posted by angin - 2007/09/21 15:57

@Marinelli
You can update those by replacing the old files with the new ones.

@Mclaughland

Do you mean the default image not being loaded if none exist?

=====

Re:MiniFrontPage meantime updated

Posted by mclaughlan6916 - 2007/09/21 16:14

yes I think so. But as far as I am aware I have added a default image but i still get this error :
Warning: Division by zero in W:\www\joomlaplazza\modules\mod_minifrontpage.php on line 196

Warning: Division by zero in W:\www\joomlaplazza\modules\mod_minifrontpage.php on line 201

I only seem to get this error when I try to submit articels via ja submit component.

=====

Re:MiniFrontPage meantime updated

Posted by mclaughlan6916 - 2007/09/21 16:23

after haveing read through the posts again in detail that does appear to be the problem. I have added my own path as so but this is still not getting loaded.

```
$default_image_path = "/images/stories/noimage.jpg";
```

=====

Re:MiniFrontPage meantime updated

Posted by angin - 2007/09/21 16:57

How about write permission issue for this default image or folder?

=====

Re:MiniFrontPage meantime updated

Posted by mclaughlan6916 - 2007/09/21 17:25

The write permissions are ok, I think it might actually be a ja submit problem after all. because if I try to submit content and leave out all the images somehow two images that dont exist appear in the backend conent item editor images tab. The two are users/||right||1|| and the same left. If I removethem from the active image section the default in loads in minifrontpage without a problem.

=====

Re:MiniFrontPage meantime updated

Posted by angin - 2007/09/21 17:35

mclaughland,

I've tried it using JA Submit 2.2.0, and the image I've attach for the article works fine on minifrontpage. And then I also tried to remove that image from the backend, and the default image also load fine.

What version of JA Submit you used?

=====

Re:MiniFrontPage meantime updated

Posted by mclaughlan6916 - 2007/09/21 20:20

its version 2.1. IS 2.20 the paid for version

=====

Re:MiniFrontPage meantime updated

Posted by Milos - 2007/10/09 09:33

Well I think I have found the solution. It's the images path.

If the path of the included image "is not" in the same Joomla Installation, that means somewhere on other websites, this tool can't locate the external image (it thinks local not global) and then the Error appears.

So if you want to use this nice module you must only use articles which images are on your joomlas-site server.

Looking forward for a fix.

B)

Re:MiniFrontPage meantime updated

Posted by Ricardo Sousa - 2007/10/09 14:15

Hi,

Yes images should be in images/stories folder or under it...

Regards ;)

=====

Re:MiniFrontPage meantime updated

Posted by Erwin Schro - 2007/10/09 14:35

@Milos,

Looking forward for a fix.

Did you mean fix for those external image path issue? Because if yes, then I can't provide you with that, so like you've found yourself, everybody who want to use this module should have their article images on the /images/stories/ folder like Ricardo said.

Hope you undersand...;)

=====

Re:MiniFrontPage meantime updated

Posted by Estep - 2008/02/19 16:22

I have the same problem, and it only appears when I use JA Submit.

I chose no images (zero, nada, bubkiss) to load for my article. I still get the weird "default" userimages|| on the back-end.

When I remove those images from the backend (can't from the front-end), then MFP loads fine.

If I don't do anything, then I get the same errors. My default is not pointed external. There are no image files called, nor any web-based images called on the articles.

Hello kavana,
let us know about your php server version
i think the Division by zero become from your server

and about like this error Warning: getimagesize() : Unable to access
please try to change your images directory chmod become to 777
