
GUIDE to MiniFrontPage module

Posted by Ricardo Sousa - 2007/08/12 17:45

MiniFrontPage module for Joomla! by templateplazza.com SIMPLE GUIDE!

You want to show the Joomla! core home page into a module?
Great we have the solution: MiniFrontPage module from Templateplazza.com!

Here is the Guide...

How to install?

Download the newest version from there:

http://www.templateplazza.com/component?option=com_remository/Itemid,67/func,fileinfo/id,78/

After install the module using Joomla! module installer... (If you don't now how to install a module find useful information there: <http://help.joomla.org/content/view/1686/260/>)

The module is now installed but not published, so...

How to publish and set the module?

Open the Joomla! Modules from the menu Modules -> Site Modules

Now look for the "MiniFrontPage Module" and open it by clicking on the module title.

You should now have the module configuration and parameters...

I

First, lets look at the "Details" part:

<http://www.aiedi.com/tp/MiniFrontPage/part1.gif>

Title: Insert there the tile you want to show in the top of the module!

Show title?: Select Yes if you want to show the module title or No if you don't want to. Note that if you choose NO the module will be without tile!

Position: You should select the position where you want your module to show up on the template. To know your joomla template module positions and see where they are located you can type this in a new page:

[http://www.yourjoomlasite.extension\(com,pt,org...\)/index.php?tp=1](http://www.yourjoomlasite.extension(com,pt,org...)/index.php?tp=1)

Now you will see you positions and can set the position in the list!

Module order: Set the order this module will show up inside the position you've selected before.

Access Level: You can set to show this module to everyone or just to your registered users ;)

Published: If you want the module to show up, set Yes!

Menu Item Link(s): Set the pages where you want to show the module. If you want to show in every page set "all". if you want to show in one page select the page linked by a menu (you can select more than one page using the mouse+ctrl)

II

Lets look at Module Parameters:

<http://www.aiedi.com/tp/MiniFrontPage/part2.gif>

Enable Cache: Set yes if you want to cache the content of the module or No if you don't want to!

Module Class Suffix: You can set a suffix like "-blue" if your template have that option.

Section(s): Insert the sections IDs where you want the MiniFrontPage will look for the content items. Multiple IDs are allowed, just separate these ids by ","! You can see the section ids in the front of section names using the Section

Manager menu of Joomla!

Category(s): Insert the categories IDs where you want the MiniFrontPage will look for the content items. Multiple IDs are allowed, just separate these ids by ","! You can see the category ids in the front of category names using the Category Manager menu of Joomla!

Order by: This will set whether you want to show the content items ordered by the newest (just like Latest News core module) or the most recent read (like Popular News core module).

Period of Novelty (Days): Set the number of days when the articles/contents will be considered NEW so after this time the articles/contents won't be showed up.

Show category title: Select Yes if you want to show up the category title of the item on the top of each introtext.

Frontpage Items: Select Yes if you want to show up the content items that are published in the front page too!

Display author: Select Yes if you want to show up the author of the articles below the title.

Display date articles created: Select Yes if you want to show up the article creation date below the title.

Limit intro text: Set the number of characters that introduction text of the articles will be show up.

Title Link: Select Yes if you want the title of the article will be a link to the full article page.

Full story link text: Insert title/text that will become a link to the full article.

Number of columns: Insert the number of columns where MiniFrontPage will be formatted/styled. Note, Num.of Col = Num.of introtext to show up + 1 column for another articles title link.

Number of Articles to display: Insert the number of articles that MiniFP will display. Note, number of articles = number of intro text set to display + article titles link for Another Article. For example if you set to show 10 articles and you have set to show (next parameter) 2 for articles intro text then the list on Another Articles will show 8 article titles link.

Number of Introtext: This will set the number of articles intro text to show up.

Show thumbnails: Select Yes if you want to show the thumbnails of the article image that have been set using mosimage mambot or inserted image that have been uploaded to the /images/stories/ folder. For MiniFP ver1.1, only the images that on the last inserted on the intro text or full text will be build as a thumbnail. And You better check the MiniFrontPage mean time update also on this forum, it will fix some of the thumbnail generation issues.

Thumbnail Image Width: Set the width of the thumbnail image;

Thumbnail Image height: Set the height of the thumbnail image;

Preserve Aspect: If you select this to Yes, the image will be thumbnailed based on the width value and the height will not be necessary calculated because thumb image height will be set according to the ratio of the original image!

Header Title for another articles link: Set the title text to show up above another articles link.

After set all the necessary parameters, don't forget to SAVE it and now your MiniFrontPage is up and running!

Regards ;),

Re:GUIDE to MiniFrontPage module

Posted by MOT NGUYEN - 2007/09/01 06:22

for minifrontpage, can you make multiple copies to put in more than one module position? Also, do you have to set both sections and categories? or can it just for section alone and leave blank for category?

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2007/09/01 07:23

Hi Mot Nguyen,

Of course you can, just like another modules, you can copy minifrontpage to accomodate another sections or categories items. You can set either section id and category ids or only section id. Just try those combination to experiments and report here if you find something.

Regards,

Re:GUIDE to MiniFrontPage module

Posted by Zee S. - 2007/09/29 19:07

Hi Erwin,

I see you are online. I was wondering how to place this module in frontpage (mainbody). I use silvero template and when I assign this module to position mainbody, nothing shows up. What could be a problem.

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2007/09/29 19:16

Hi Zee,

I believe what you meant by the 'mainbody' module position was a user1 or user2 or banner module positions (the one on the top of the mainbody), right Zee ?

So, you should assign the minifp to the user1 or user2 or banner module position, so it will display right before your mainbody area.

:cheer:

Re:GUIDE to MiniFrontPage module

Posted by Zee S. - 2007/09/29 19:20

ok I got it

Re:GUIDE to MiniFrontPage module

Posted by Poramate Doungnetre - 2007/10/04 05:58

I found error

Warning: imagejpeg() : Unable to open
'/home/xxxxx/domains/xxxxxx/public_html/the_bulletin/images/stories/trade/conclusion_of_futures_thumb.jpg' for writing
in /home/xxxxxx/domains/xxxxxx/public_html/the_bulletin/modules/mod_minifrontpage.php on line 120

It can't create thumb

How I fix it?

Thanks

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2007/10/04 09:01

Hi Poramate,

Have you checked that image folder (/images/stories/trade/) whether it's ok for writing or not?

;)

Re:GUIDE to MiniFrontPage module

Posted by Poramate Doungnetre - 2007/10/04 09:16

ok thanks It works. :)

Re:GUIDE to MiniFrontPage module

Posted by Chris - 2007/10/04 12:00

Hi,

Great module, but I'm having a few problems. I just want to display items from within selected categories in my module - not comments from entire sections.

However - when I try and leave the sections box empty and click save, a value of "1,2,3" gets automatically inserted.

How can I just display items from specific categories, and not whole sections?

Cheers,

Chris

Re:GUIDE to MiniFrontPage module

Posted by joomlabs - 2007/10/04 12:51

Just fill the Section IDs parameter with section where your category(s) belong to. Don;t leave it empty coz the default one will be inserted.

;)

Re:GUIDE to MiniFrontPage module

Posted by CHOP - 2007/10/04 15:43

I have a little issue here:

Everything works fine, but it won't generate a thumbnail for a "normal" (non MOSimage) image. The image is displayed in the intro, before the text.

=====

Re:GUIDE to MiniFrontPage module

Posted by joomlabs - 2007/10/04 15:50

What Editor are you using on the backend?

=====

Re:GUIDE to MiniFrontPage module

Posted by joomlabs - 2007/10/04 15:52

And FYI, this module look for article images from /images/stories/ folder. Where you put your article image?

=====

Re:GUIDE to MiniFrontPage module

Posted by Saso Pucnik - 2007/10/06 20:04

How can I display the Mosets Tree directory in mini F module.

What is the configuration?

=====

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2007/10/06 20:24

Hi Saso,

Unfortunately you can't do that. Mooset Tree is a component and the minifp is expecting only content items to be displayed on it.

Hope this clear enough.

;)

=====

Re:GUIDE to MiniFrontPage module

Posted by clubart - 2007/10/06 21:12

Uf, I didn't expect this.

In the demo the first tab is Directory, I hoped to have the seme with the Mooset Tree.

Is there any other way to achieve this kind of look?

=====

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2007/10/06 21:26

On the Demo, those are not minifrontpage and those are a 'hard code' that you can make it your self with using HTML script...;)

@Kev Ken,

I am trying to use the menu suffix, but it is not working have put -enter, enter, and also table.enter. But have no effect, can you tell me what i'm doing wrong?

Menu Suffix or module class suffix?

@Andy

I am also trying to get the mini front page on the index of my site. I am new to joomla. I do nothave a main content option to put the module into. Does that mean my tempalte doesnt support it?

If your template have any module positions on it, than your template support minifrontpage, because minifp is just a module. Keep learning Joomla then Andy. ;)

Re:GUIDE to MiniFrontPage module

Posted by Chiko - 2007/12/13 09:10

hi,

I.m confused. I'm using the communa plazza template. where should i place it, on which module position??

you can check out my site at <http://www.octopa.co.zw>

=====

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2007/12/13 10:57

@Nikraf

Have you checked your articles/content items created date, are these date still in range of your minifp 'Period of Novelty Days' parameter?

;)

=====

Re:GUIDE to MiniFrontPage module

Posted by nkraf - 2007/12/13 11:34

Thanks Erwin!

i added another zero to the default 1200 days of the Period of Novelty and it works!

thank you again!

have a wonderful Christmas

God Bless!

=====

Re:GUIDE to MiniFrontPage module

Posted by Chiko - 2007/12/13 14:16

hi,

Can someone please help!!!

Don't know where I should place it so that it "replaces" the home page.

I'm stuck, been trying for many days to figure the solution on my own but to no avail.:S

=====

Re:GUIDE to MiniFrontPage module

Posted by joomlabs - 2007/12/13 14:29

Chiko,

You can place the minifp wherever module positions available on your template. For Comuna you should refer to the available module positions provided by Comuna. Please refer to the Comuna template guide.

Re:GUIDE to MiniFrontPage module

Posted by casey cargill - 2008/01/14 04:28

Hi guys.

I bought your service. w00t.

I'm using the gaming template. w00t, w00t.

Ok now I want to install this mod and other, but when I go to install in my CP (using legacy) I get a "cannot move file." error.

So now I'm trying to follow the tips from the Joomla help site (installing modules).

But I'm running into an issue. I go to my FTP program. I unzip the zip files > into a file. I go back into my FTP to the directory

/public_html/joomla/administrator/components/com_installer/

but the next folder after that should be "modules" yet it's not. It says "modes". There is no modules folder. Only modes and "views".

I'd really like to know how to INSTALL the mods. Thank you.

EDIT:

I found this

/public_html/joomla/administrator/components/com_installer/views/modules/mod_minifrontpage/

So then I created "mod_minifrontpage" folder, put those files in it, went back to my cp and tried to install. Still I get "Please enter a package directory".

This is getting tiring. Please help me someone. Thank you.

=====

Re:GUIDE to MiniFrontPage module

Posted by RonySYZ - 2008/01/14 08:11

Dear casey,
welcome and thanks for joining at TP

let us know that you used MiniFrontPage for 1.0.x at J!1.5...?

Regards
Rony

Re:GUIDE to MiniFrontPage module

Posted by Juddster - 2008/02/04 12:53

Great module!

Can I set just a SectionID, and not a CategoryID? I tried it, but only seems to work if I also specify a CatID...

Re:GUIDE to MiniFrontPage module

Posted by Disable Item ID - 2008/03/03 12:48

Is there a way to have the links generated by minifrontpage have itemid=0?

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2008/03/03 17:39

Hmm...strange idea....when lot of people have trouble with that Itemid=0, you want it to be like that...

Re:GUIDE to MiniFrontPage module

Posted by margaret - 2008/03/26 01:45

I am trying to figure out how to setup this module.. what are the basic steps?

Re:GUIDE to MiniFrontPage module

Posted by Myfia - 2008/03/26 10:47

Hello Margaret,

Using MFP is simple, you just have to give attention for some setting, in this case:

1. section id(s) *
2. category id(s) *
3. Period of Novelty (Days) : duration life of active content
4. thumbnail image (thumbnails will created automatically)

5. image source for thumbnails (make sure that there's image for thumbnails creation)
6. Limit intro text (you can do trial what best layout)
7. Full story link text : it can changed with any word

* if needed writing down section and category id(s) that will showed as MFP Content.

Hope this usefull.

Re:GUIDE to MiniFrontPage module

Posted by tim - 2008/03/26 10:51

can you explain more. is the mini front page module, supposed to stay on the same page, what i mean is when you click the article, does the article stay on the same page or go to a new page like static content and other content modules. When i was using it, it showed the article on the same page at the bottom of the page which did not look good

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2008/03/26 12:05

@Tim,

First You have to understand the concept behind the Joomla Menu Item(s). This is where the Itemid came from on all of your menu item link(s)/URL. Every Menu Item have their respective Itemid. And all of your published module can be set up to be positioned on one or more Menu Item(s).

There are many post in this minifp subforum answered about this Itemid issue. You can search some of them which I believe have been solved the problem like you had. Or you can just search using Google using the "Joomla Itemid" keyword.

Re:GUIDE to MiniFrontPage module

Posted by bionatur - 2008/03/29 15:50

I installed the new 1.2.4 version and is out of order in him the thumbnail, that is does not give the picture In a suitable size.

I have a picture in 226x192 pixel.
I grant it size of the picture 150x100 px.
The picture appears in a large size, 266x192 px.

Why?

The 1.2.3 version did not do this.

And:

If I have is an thumbnail from a picture, reads it then all minifp from a size independent, does not do other one picture in another size.

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2008/03/29 19:09

Bionatur...

I think it's better to switch back to the 1.2.3 version in the mean time we work on the 1.2.4 bugs issue.

;)

Re:GUIDE to MiniFrontPage module

Posted by Niki - 2008/04/24 08:45

1. section id(s) *
2. category id(s) *

My section and my category is emty :(unkatégorizet ? this mean i have to make category ?

=====

Re:GUIDE to MiniFrontPage module

Posted by Erwin Schro - 2008/04/24 08:52

yes, you should make a section first, and then make a category for that section. Then assign your content item for that

section-category. that's all.

Re:GUIDE to MiniFrontPage module

Posted by Niki - 2008/04/24 11:15

I make section from content - section and category from content - category

section 1

category 2

then from article manager i give section and category

but nothing happened

p.s in module manager in mod i write 1 and 2

Re:GUIDE to MiniFrontPage module

Posted by Mary Murtha - 2008/05/25 18:30

Hi,

I made a post in the template support area for the Bulletin plazza, but The problem is with the Mini Frontpage.

I thought I'd continue here. Pehaps someone cn help me resolve this problem.

Site URL: <http://www.internetmarketingtips4u.com/>

What I did. I wanted to uplaod some different images to the modules created with Mini Frontpage.

I uloaded 1 image in the media manager. Then I put that image in the section, then Category, the article by using the image button under the editor.

When I checked my site, there is a Black box where the image should be on the front page, but when clicking on the article, the image shows just fine!

I did see where someone else had a similar problem, but resolved it by ticking "No" to keep imge attributes (or whatever it is).

But when I did that, nothing changed. I am still stuck with a black box where the image should be.

Can someone tell me how to fix this problem please?

I've been working on this for 3 days, and cannot find a solution!

I absolutely need to get this site finished by Tues of this week.

Thanks in advance ...

Mary

Update: For someone else who may have the same problem

I figured out the problem.

I was using a gif file. I changed it to a jpg file, and finally got the image showing.

The wierd part about it when I used a gif file was that a ghost image was created in the media center in the stories folder. It was black though.

Re:GUIDE to MiniFrontPage module

Posted by Felix - 2008/05/27 05:43

Hello everybody,

I am quite happy with the module, but is it possible to link news image to other page than full page? If i click on the image it brings me to the full story page, but I need it to open another page (in different category).

Any idea?

Thanks

Re:GUIDE to MiniFrontPage module

Posted by Meisyal - 2008/05/27 08:18

Hey Felix. For show images in Mini FrontPage Module you can use image thumbnails.

Maybe you can try it! Or walk to walk in MiniFrontPage Topics and just find the same your want/question.

thank's
regrads,
meisyal.

Re:GUIDE to MiniFrontPage module

Posted by Felix - 2008/05/27 14:22

Hi Meisyal,

Thanks for quick reply.

I did as you advised and can't solve my problem. That is why i post it here.

The image does show in the news module, when you click on that it will open "full story news page". I am trying to find out is it possible to link that image thumbnail with other page in joomla, let say with "Contact Us" page.

Thanks
Regards

Hey meisyal,

Can you tell me how to get the intro text or description to show up in MFP please?

Site Url: <http://www.internetmarketingtips4u.com>

I am trying to add a description or intro to the top right MFP module "Latest Product Buzz".

I did check and change the amount of characters from 1 to 200 in the parameter section. but am not having any luck.

Hello Marry,

First, please make sure that you have fill in the corrects ID at Section(s) & Category(s) parameters.

Second, Then see Limit intro text parameter and make sure that parameter more than zero ("0").

and publish its

Regards

Rony

Hi Rony,

Thanks!

Problem was solved.

I had everything in the sections and cats set up.

The problem with them not showing up was because I forgot to set the "read more" button up. For some reason MFP will not show a description unless one is marked by that dividing line. ;)

Appreciate you help!

Hello,

I have a problem with thumbnails. According to your manual

Show thumbnails: Select Yes if you want to show the thumbnails of the article image that have been set using mosimage mambot or inserted image that have been uploaded to the /images/stories/ folder. For MiniFP ver1.1, only the images that on the last inserted on the intro text or full text will be build as a thumbnail. And You better check the MiniFrontPage mean time update also on this forum, it will fix some of the thumbnail generation issues.

in Article I have two images, one inserted as an image and another through mosimage.

The problem is that the module take the default image inserted, and I need to be inserted image through mosimage.

As we set?

Hello Domingo,
MFP only make generated image from the first mosimage.
So until now, you can not do that like you want

Regards
