## problem after install of new version

Posted by Holger Theisen - 2007/11/17 21:50

---

Hi,  
I used to have it working well then thought I should use the new version.  
deinstalled the old version. then installed the new version to use the rounded corner thingy (very nice by the way) now no effect. whatever quote I use. it does not work anymore i only see the {/\_...\_quote}  
What can i do?  
thanks  
Holger

Have you published the new installed xtypo mambot?

;)

yes I did publish.  
Here is the procedure in detail.  
I deleted the old version via mambo backend.  
checked in the server if the files are really gone. Then installed the new version.  
There is actually no reason why it should not work.  
I tried it with xtypo in the first position under mambots and the last one. No effect.  
There is another issue I could see. the quotes that I used with the old version still worked until I saved the article again.  
Then the quoted text disappeared totally.  
funny eh?  
cheers  
Holger

Holger,

I dont now but maybe some incombability in this new version with mambo :S

Regards,

no i checked the server logs. and also checked the permissions and the file ownership. everything ok.  
nevertheless in reinstalled it and deinstalled 2 more times and then all of a sudden for no reason it is working.  
You can close this ticket.  
should I come across an explanation for this strange behavior, I will let you know.

Hi holger,

The code difference between the old version and the new one (besides new tags addition) is only at the line 230

```
$row->text = preg_replace("/{".preg_quote($key)."}".preg_quote($match)."{/".preg_quote($key)."}'s",  
$startcode.$code.$endcode , $row->text );
```

in the new version it has been changed into

```
$a = preg_quote($match);  
$a = str_replace("'", "\'", $a);  
$row->text = preg_replace("/{".preg_quote($key)."}".$a."{/".preg_quote($key)."}'s", $startcode.$code.$endcode , $row->text );
```

Anyway, glad to know the problem has been solved :)

OK. here is the thing.

If you go to <http://moduledemo.templateplazza.com/content/view/15/29/> and copy and paste the tag for xtypo\_quote\_right and f that box itself and paste then it does not work.

In the box the tag looks like this: {xtypo\_quote\_right}. . . {/xtypo\_quote\_right }

But it should looks like this       {xtypo\_quote\_right}. . . {/xtypo\_quote\_right}

What did we learn. Don't be lazy - and type, rather than just copy and paste hehehe.

cheers

Holger
