
FishEye and validation

Posted by Sulpher - 2007/12/02 19:06

Hello dear developers! I decided to validate my site and found some mistakes in the code:

First of all, there is a misprint:

```
.fisheyeItem span {  
display: none;  
position: absolute;  
}
```

As you can see, the right will be position. But for IE6 I made position: relative, otherwise I get all menu text above the icons. :)

And validator wrote next things:

```
48 Property behavior doesn't exist : url('modules/fisheye_menu/png.htc')  
53 Property behavior doesn't exist : url('modules/fisheye_menu/png.htc')  
58 Property behavior doesn't exist : url('modules/fisheye_menu/png.htc')  
63 Property behavior doesn't exist : url('modules/fisheye_menu/png.htc')
```

Unfortunately, I don't know a language that used in this script, so I couldn't fix it myself. May you, please, help me in this? :)

The errors you present are not in a code written by us but in a kind of script!

I will try to see it and I will return to you soon!

Regards,

Ricardo Sousa

It will be just great!
Thank you ever so much, Ricardo! :)

Good luck with development.

Re:FishEye and validation

Excuse me, any news regarding the script? :)
If you have no enough time, could you, please, recommend script author's url? I'll ask him.

Everything is valid on my site except this moment and I have to remove "W3C valid" button, so would be nice to correct it. :)

Hi,

I have worked around it...

Lets try this modification...

Please Open this File:

http://www.templateplazza.com/images/fbfiles/files/FIX_To_FishEye.zip

Copy the mod_fisheye_menu.php to your modules folder replacing the original...

After copy the pngfix.js file to the modules/fisheye_menu folder!

Lets give me feedback!

Best Regards,

Ricardo Sousa

Re:FishEye and validation

Posted by Sulpher - 2007/12/08 18:53

Well... I tried to use and got a success! The css code is valid right now, but from the other hand, W3C validator found two errors connected with using the fix script that you attached.

Please take a look here:

<http://polygon.cre-active.eu> - it's old FishEye menu variant

<http://cre-active.eu> - there is new fixed variant that you gave.

There are buttons of validation in the bottom of the site, so you may see what I am talking about.

As I understood, the problem is in here:

Since validator mention about next mistakes:

Error Line 47, Column 11: document type does not allow element "head" here.

and:

Error Line 49, Column 6: end tag for "head" which is not finished.

Unfortunately, I don't know how to fix this one.

Hope that it isn't a big mistake and it's possible to fix it quickly.

Best regards,
Eugene.

Wow, I could fix this little mistake myself.

I just excluded link on script from mod_fisheymenu.php and included in the of my template. Now all works fine!
Everything is valid! :laugh:

Thanks for supplement and support once again, Ricardo!

Sulpher,

I am happy you could find the solution for your problem... and that i could be helpful in that solution :)

Best Regards,

Ricardo Sousa

Posted by Sulpher - 2007/12/08 20:02

I am sorry. Just been found to check out the site in IE6... :) Well, there is a problem with PNG-24 yet...
May you take a look?

Try to install one of this mambots and take a look:

http://extensions.joomla.org/component/option,com_mtree/task,viewlink/link_id,859/Itemid,35/

http://extensions.joomla.org/component/option,com_mtree/task,viewlink/link_id,458/Itemid,35/

Regards,

It seems a little mistakes around the menu module yet...

I tried to install each mambot which you recommended above, but they both made the menu working wrong: when I try to direct (hover) mouse on buttons, buttons just getting disappeared! Take a look here:
www.polygon.cre-active.eu - there is fixed version of FishEye menu (according your advices in this topic) and PNG corrector mambot.

Another kind of problem is errors with Javascript (browser IE6 wrote about these errors in the bottom) when I load the page first time, if I refresh the page all is okay. It's because I inserted this line:

in the template. If I remove this link from the template, the problem is gone.

Look forward to yours reply,
Eugene.

In what browser it is giving problems?

If it still bugging please i will try to fix all it!

Regards,

Re:FishEye and validation

Posted by Sulpher - 2007/12/11 11:05

I just been fixed it myself. :) it took 2 days to ultimately solve this problem but now all works fine as well as both code (html and css) are valid.
PNG mambots does not required.

I'll write details later. (tomorrow)

Thanks for support.
